

Chapter 8 Vocabulary

Copy all vocab words into your notebooks and define/describe each. Good practice would be to organize the words to reflect their relationships and any connections that exist between them. For example: the words "Seismic shaking, mudflow, landslide, liquefaction, and Tsunami" could all be grouped as they are all earthquake hazards. Use your textbook and any other resource to define these terms:

Earthquake
Aftershock
Seismic waves
Epicenter
Fault
P Wave
Liquefaction
Rayleigh Wave
Foreshock
Tsunami
S Wave
Surface Wave
Elastic Rebound Hypothesis
Seismogram
Body Wave
Moment Magnitude Scale
Landslide
Seismograph
Richter Scale
Focus
Seismic Gap
Modified Mercalli Scale
Magnitude vs. Intensity
Seismic Shaking
Love Wave
Mudflow
